

# Duo-Chek II

## High Performance Check Valves

**CRANE**

THE VALVE EXPERTS

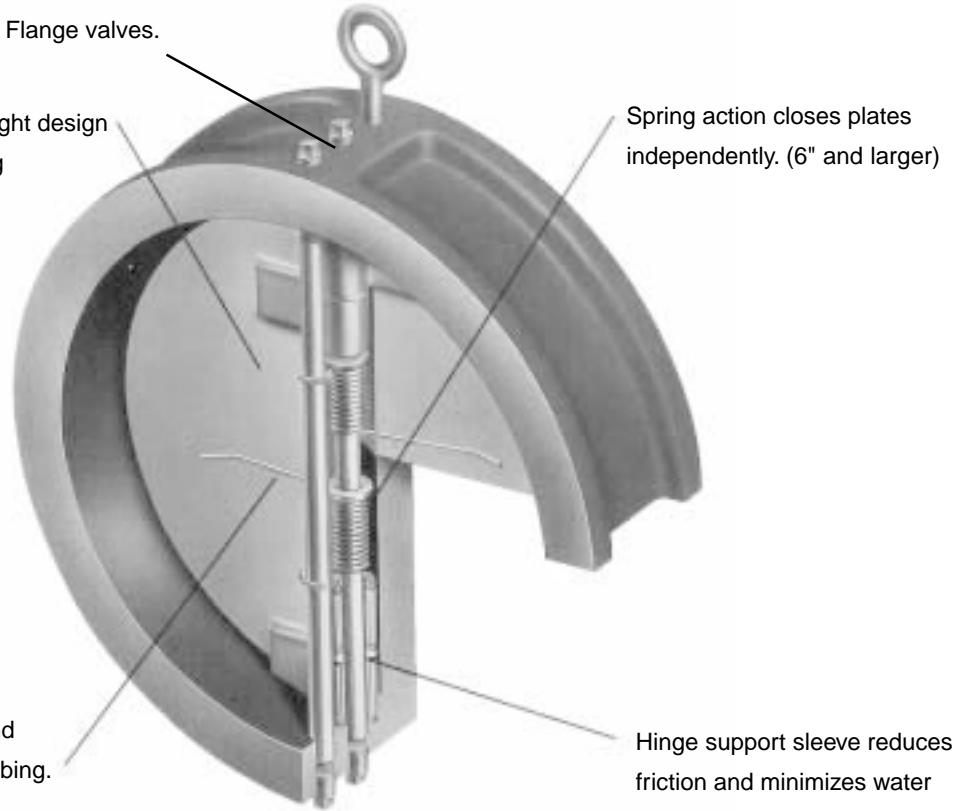

## Duo-Chek II – The High Performance Check Valve

Duo-Chek II high performance check valves are the original Mission wafer check valves introduced to the market in the late 50's. They are available in the sizes, pressure classes and configurations you need to meet the most demanding of applications. Our product range includes, but is not limited to,

- Sizes: 2" to 72"
- ASME Pressure Class 125 through 2500
- API 6A and 6D pressure classes
- DIN, JIS, BS, AS, and ISO standards are also available.
- Wafer, lug, double flanged and extended body styles
- Configurations available in retainerless style.

Retainerless valves for critical applications without pin retainer penetration through the body are available in Wafer and are standard in Lug and Double Flange valves.

- Body Materials:  
Cast Iron, Ductile Iron, WCB Cast Steel, 316 Stainless Steel. All alloys.
- Resilient Seat Materials:  
EPDM, Buna-N, Neoprene, Refrigeration-grade elastomer, Viton
- Integral and overlaid metal seats also available
- End Connections:  
Raised Face, Plain Face, Ring Joint, Weld-End, Hub-End.

### Industry Standards\*

API 594	Valve Design
API 598	Valve Pressure Testing & Inspection
ASME B16.5 & B16.47	Flanges
ASME B16.34	Pressure / Temperature Ratings
API 6D	Pipeline Valves
API 6A	Production Valves

\*Duo-Chek II meets or exceeds these industry standards.

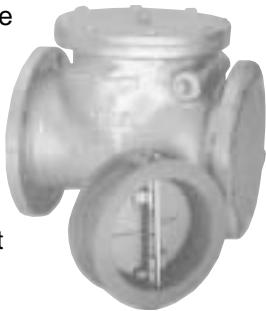

## Features and Benefits

Features	Benefits
<b>Lightweight and Compact Wafer Design</b>	Installs between mating flanges with 10 to 20% the weight of flanged swing checks in popular sizes - <b>Saves money in initial valve cost and provides lower installation cost.</b>
<b>Dual Plate, Flat Seat Design</b>	Plate heel is lifted first by design to prevent seat wear. Employs two spring-loaded plates with flat seats - <b>Gives superior performance and bubble-tight shutoff with resilient seats.</b>
<b>Independent Spring Action</b>	Maximum deflection of 140°, provides improved valve response and longer life - <b>Saves money with longer valve life and improved system performance by reducing water hammer.</b>
<b>Independent Plate Suspension with Unique Hinge Design (larger sizes)</b>	Improves valve response and reduces friction forces by 66% - <b>Further assurances for better performance with faster valve response.</b>
<b>Simple, External Body Geometry</b>	Configuration simplifies valve insulation - <b>Saves money.</b>
<b>Variety of Body Designs Available - Lug and Double Flange</b>	Provides options to suit application needs - <b>Eases your selection process by utilizing the industry leader as your single source.</b>
<b>Wide Variety of Materials</b>	Versatility for many services - <b>Satisfies more application needs.</b>
<b>Flexibility in Installation Position</b>	Provides more rigidity than pipe, eliminating concerns of pipe bending loads of flanged valves - <b>Safety against thermal or seismic catastrophes.</b>
<b>Body Strength and Rigidity</b>	Some sizes suitable for horizontal or vertical up positions - <b>Simplifies piping design, eliminates constraints that swing checks create.</b>
<b>Retainerless Duo-Chek Design Eliminates Tapped Holes in Body</b>	For critical service applications, prevents possible escape of unwanted and/or hazardous materials to atmosphere - <b>Safety in critical services eliminates and/or environmental concerns. Standards in Lug and Double Flange Designs.</b>
<b>Vertical Hinged Design</b>	In horizontal position flow allows plates to function freely and full open under lower flow conditions as compared to swing check - <b>Reduces pressure loss, improves dynamic response and eliminates valve chatter.</b>
<b>Special Valves Meet Market Needs:</b> <ul style="list-style-type: none"> <li>• UL/FM Listed</li> <li>• Rubber or Urethane Lined</li> <li>• Hub Ends (Grayloc®)</li> <li>• Weld Ends</li> </ul>	Wide size range, pressure range and added options allow further market needs to be met - <b>Reliance on world's largest wafer check line to supply more needs.</b>

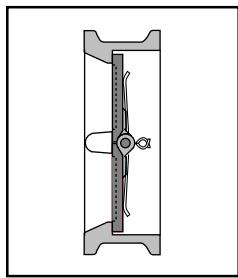

## Specify the Duo-Chek II ...to your advantage

Leading engineering specifiers specify the Duo-Chek II for check valve applications because it provides high performance. Extensive research and testing with demonstrated performance has earned worldwide recognition, unmatched in the industry.

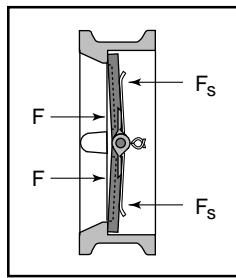

The Duo-Chek II wafer valve design is generally stronger, lighter, smaller, more efficient and less expensive than conventional swing check valves. Its design meets API 594 which is approximately one fourth the face to face dimension and 15% to 20% the weight, on most popular sizes, making them less expensive than a swing check valve. It is much easier to install between standard gaskets and line flanges. The savings compound during installation due to ease of handling and only one set of flange studs is required. Therefore, it is more cost effective to install, and also to maintain.

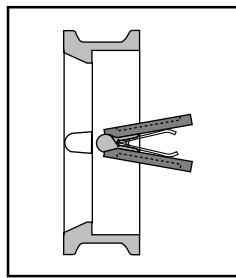

The Duo-Chek II also offers special design features that make it a high performance non-slam check valve. These include a scrub-free opening, and in most sizes a unique independent spring design as well as an independent plate support system. These features may not be found in other check valves. Other configurations offered include lug, double flange and extended body.

Plates in closed position. Top view.

Heel opens first as flow begins.

Plates fully opened (85°)

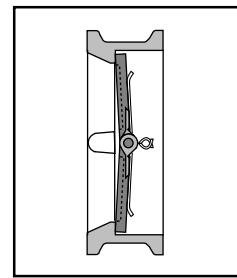

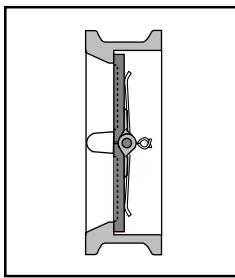

Plate toe closes first as flow decreases.

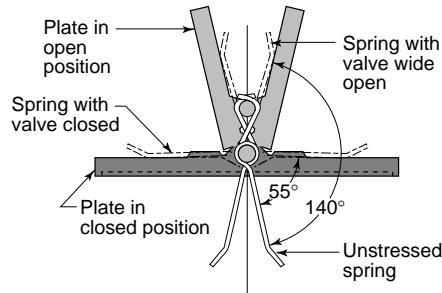

Plates fully seated for bubble-tight shutoff.

The innovative dual-plate design of the Duo-Chek II employs two spring-loaded plates (disc halves) suspended on a central vertical hinge pin. As flow begins, the plates open in response to a resultant force ( $F$ ) which acts as the center of the sealed surface area. The contact point of the reacting spring leg's force ( $F_s$ ) acts beyond the center of the plate area, causing the heel to open first. This prevents rubbing of the seal surface prior to normal plate opening, eliminating wear.

As the velocity of flow decreases, torsion spring action reacts automatically. This moves the plates closer to the body seats, reducing the distance and time of travel for closure. By having the plates closer to the body seats at the time of flow reversal, the valve dynamic response is greatly accelerated. This dramatically reduces the water hammer effect for non-slam performance.

At closing, the point of spring force causes the toe of the plates to close first. This prevents dragging of the heels of the plates and maintains seal integrity for much longer periods.

### Independent Spring Design

A spring design of the Duo-Chek II (sizes 6" and larger) allows higher torque to be exerted against each plate with independent closing in response to the process stream. Testing has proved this action provides up to 25% improvement

in valve life and 50% reduction in water hammer.

Each of the dual plates has its own spring or springs, which provide independent closing action. These independent springs undergo less angular deflection, only 140° as compared to 350° for conventional springs with two legs.

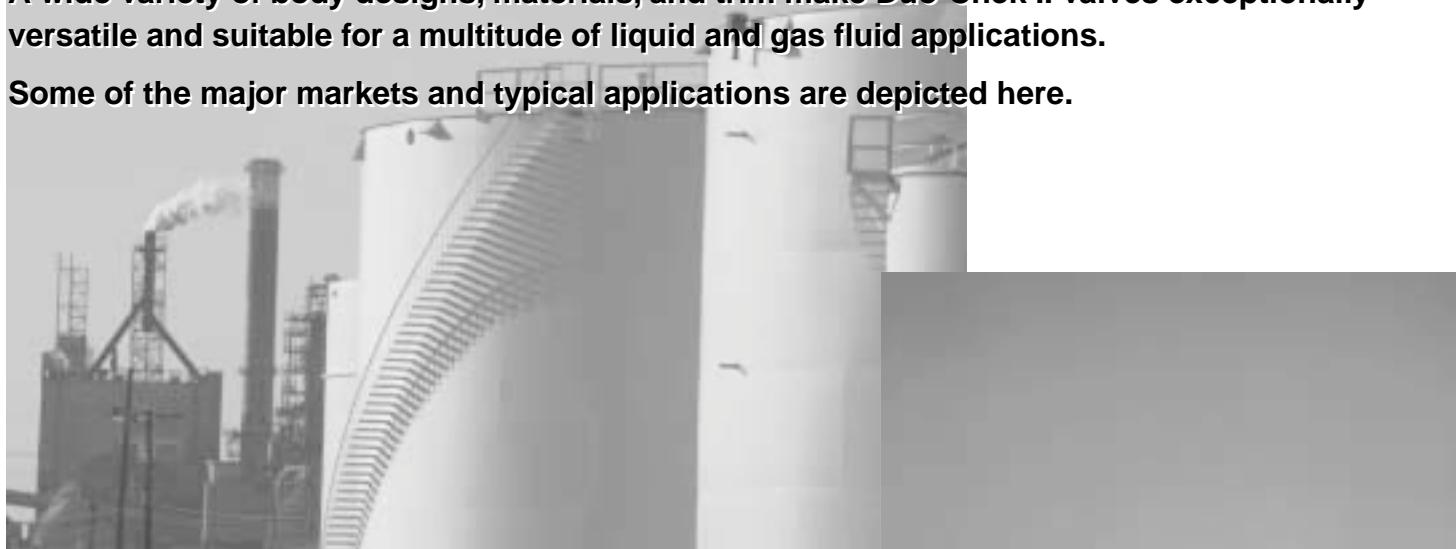

### Independent Plate Suspension Design

The Duo-Chek II unique hinge design reduces friction forces by 66%, which improves valve response significantly. Support sleeves are inserted through the outboard hinges so that the upper hinge is independently supported by the lower sleeve during valve operation. This allows both plates to close at the same time for quick response, and excellent dynamic performance.

## Applications

A wide variety of body designs, materials, and trim make Duo-Chek II valves exceptionally versatile and suitable for a multitude of liquid and gas fluid applications.

Some of the major markets and typical applications are depicted here.

### Petroleum Refining

Hydrogen  
Cracking  
Steam  
Crude Oil  
Gasoline  
Visbreakers  
Naphtha  
Sulfur

### Oil and Gas Production

Centrifugal Compressor Discharge  
Fire Water Lines  
Oil/Steam Separation  
Steam and CO<sub>2</sub> Injection  
Gas/Oil Gathering Systems  
Flowlines  
Wellheads

### Petrochemicals

Ethylene  
Propylene  
Steam  
Reboilers  
Gases

### Chemicals

Chlorine  
Phosgene  
Aromatics  
Polymers  
Acids  
Air Separation  
Caustics

### Power Generation

Steam  
Condensate  
Boiler Feed Pumps  
Cooling Towers  
Service Water Recirculators  
River Water Intake

### Steel/Primary Metals

Quench Lines  
De-Scaling  
Continuous Casters  
Steam  
Condensate  
Strippers  
Electro-Galvanizing

## Applications

**Marine**

Oil Tankers  
Tanker Loading Terminals  
Offshore Platforms  
Sub-Sea Manifolds  
Terminal Transfer Lines  
Barge Unloading Lines  
Shipboard Services

**Water and Wastewater**

Distribution Lines  
Pumping Stations  
Sewage Plant Blower Discharge  
Chemical Treatment  
Fire Protection Systems  
HVAC Systems

**Pulp and Paper**

Bleaching Lines  
Black Liquor  
Green Liquor  
White Water  
Steam  
Chemical Recovery

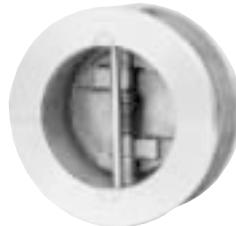

## Valve Configurations

### Style H

#### Retainerless Wafer

Sizes 2" – 72"

- ASME Classes 150 – 2500
- Dimensions pages 9–10

#### Retainerless Wafer Double Flange Valves

Sizes 2" – 72"

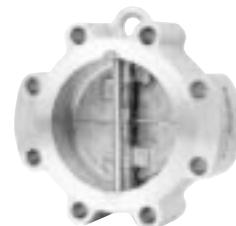

- ASME Classes 150 – 900
- Sizes & Dimensions page 11

#### Retainerless Wafer Lug Valves

Sizes 2" – 72"

- ASME Classes 150 – 2500
- Sizes & Dimensions page 12

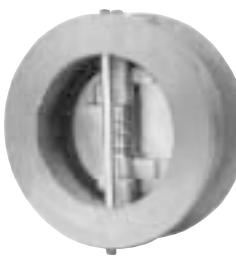

### Style G

#### Wafer

Sizes 2" – 72"

- ASME Classes 125 – 2500
- Wafer Design
- Dimensions pages 9–10

### Style X

#### Extended Body Wafer

Sizes 6" – 54"

- ASME Classes 150 – 2500
- Designed for extremely fast opening conditions
- Sizes & Dimensions page 17

### Series 800

#### Lined

Sizes 2" – 24"

- 150 PSI Pressure Rating
- Fully Lined Valve
- Dimensions page 20

## Style H<sup>†</sup> Retainerless Wafer Check Valves

### High Performance Check Valve for Critical Applications

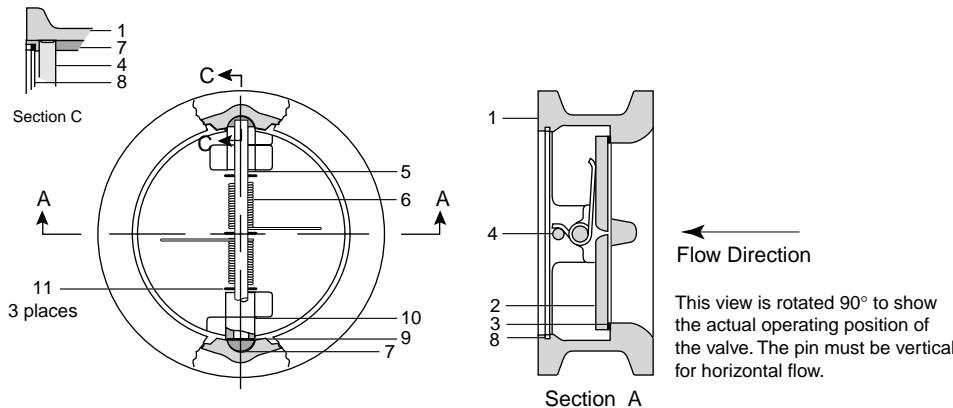

For critical applications, Style H retainerless Duo-Chek valves feature a one-piece body with no pin retainer penetration through the body.

These high performance valves utilize the same internal design of other Duo-Chek II valves with all the unique features and advantages built into them.

Item No.	Part No.
1	Body
2	Plate
3	Seal
4	Stop Pin
5	Hinge Pin
6	Spring*
7	Pin Insert
8	Snap Ring
9	Body Bearing
10	Plate Bearing
11	Spring Bearing

\* Independent spring in valve sizes 6" and larger.

Because Retainerless Duo-Chek II valves have no body penetrations potential leak paths through the valve are eliminated. This makes the Retainerless Duo-Chek II ideally suited to meet the following critical service applications:

- Hydrocarbon processing
- Chemical processing
- Any industry concerned with fire hazards or environmental safety

Key features of the Duo-Chek Style H wafer check valve include:

- A wide selection of body and plate materials
- A choice of metal-to-metal or resilient sealing

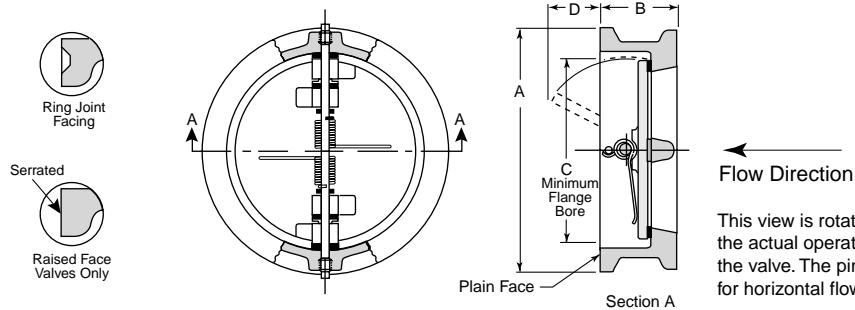

- A full range of pressure classes and sizes
- A variety of end connections
- Designs available in ANSI, API, BS and DIN pressure ratings
- Internals easily removed for field replacement under normal inspections and maintenance procedures

The advanced design of the Duo-Chek provides many operational benefits to the user, which combined with its more compact size and lower weight, make the Duo-Chek Style H an excellent alternative to a standard swing check valve.

Remarkable advantages include:

- Independent spring action (on 6" and larger) and plate suspension on larger valves
- Free release flat seats
- Springs provide superior response to flow reversal or deceleration
- Minimal water hammer
- Savings in purchase price and installation costs compared to a conventional swing check valve
- Single body design with no body cartridge

<sup>†</sup> Installation dimensions for these valves are as shown on pages 9–10.

**CRANE**<sup>®</sup>**Duo-Chek<sup>®</sup> II Valves****Style G Installation Dimensions**

This view is rotated 90° to show the actual operating position of the valve. The pin must be vertical for horizontal flow.

Style G wafer style body valves are designed with flangeless bodies with relatively short face-to-face dimensions. They are clamped between mating flanges which are connected by studs and nuts.

**ASME Class 125 (Cast Iron valves only)**

## Duo-Chek<sup>®</sup> II Valves

### Style H Double Flange Retainerless Valve Design

**Double Flanged Style Valves** bolt up similar to a bolted cap swing check or gate valve. Double flanged versions are offered as standard on larger size valves where the lay length of the body permits installation of two heavy nuts between the flanges. These valves are standard retainerless design.

Pin must be vertical  
for horizontal flow.

## Style H Lug Retainerless Valve Design

**Lug Style valves** cover the bolting the entire length of the body. Lug valves are furnished in scallop and full body designs. Scallop is furnished whenever possible to keep weight to a minimum. These valves are standard retainerless design. Lug valves can be specified with threaded or thru-hole bolting.

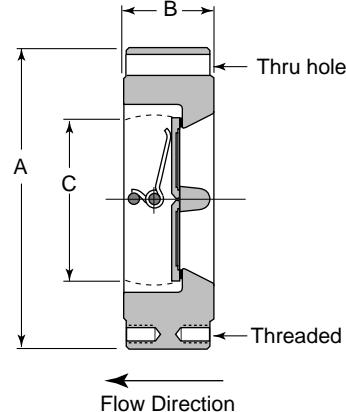

Scallop

Full Body

Pin must be vertical  
for horizontal flow.

## Duo-Chek<sup>®</sup> II Valves

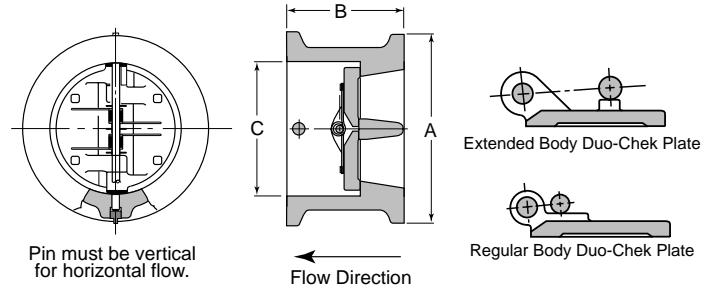

### Style X Extended Body Wafer Check Valves

The "Extended Body" version of the Duo-Chek II was designed for extremely fast opening conditions. These types of applications are generally associated with compressed gas or steam that causes damage from the explosive opening effect on the closure mechanism. This damage can render them inoperative. This is especially true with slow response valves such as swing and tilting disc check valves.

The Style X body design has special geometry and plate configuration to allow each plate to strike the stop pin in its center of percussion. To absorb high impacts, the stop pin and hinge lugs are oversized.

Typical applications include centrifugal compressor discharge where compressors are subject to "surging," air separation plants, pipelines where compressors are mounted in parallel, and steam extraction. Style X Duo-Chek valves are generally not required for liquid applications.

## Series 800 Lined Wafer Check Valves

- Sizes from 2" to 24"
- Fully elastomer lined
- Tight shutoff from 25 psi to 150 psi (lower minimum pressure available on request)
- Dual springs distribute load force evenly for quicker response
- Compatible with ASME B16.1 Class 125 and B16.5 Class 150 flanges

Typical markets include:

- HVAC
- Chemical and Petrochemical
- Food and Beverage
- Power and Utilities
- Pulp and Paper

\*Horizontal flow. Values are approximate.

## Liner Temperature Ratings

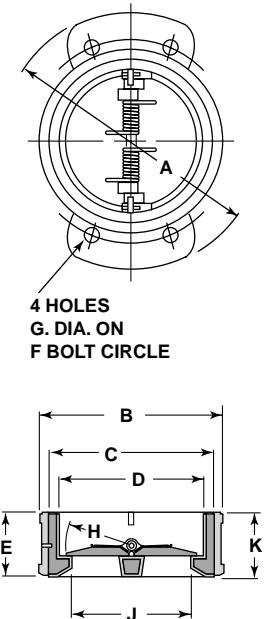

Material	Temperature Ratings (°F)
Buna-N (Standard)	+10 to +180
EPDM (Standard)	-30 to +275
Neoprene	+20 to +200
Viton	+10 to +400
Hypalon	0 to +275

Some flow media may further restrict the published temperature limits and/or significantly reduce seat life. Consult factory for additional information.

Note: Preferred mounting of check valves of any manufacturer is 5 pipe diameters downstream from the pump discharge or pipe elbow. If this is not feasible, the valve should be mounted downstream as far as possible. This is recommended to reduce the likelihood of turbulent flow through the valve, which could shorten valve life due to component vibration.

### Bill of Materials

Item	Description	Materials	Optional Materials
1*	Valve Body	Ductile Iron	No option available
2*	Liner (Molded to Item 1)	Buna-N or EPDM	Neoprene, Hypalon, Viton
3	Shaft	316 Stainless Steel	Monel
4	Shaft Plug (Qty. 2)	316 Stainless Steel	Monel
5	Plate (Qty. 2)	2" 316 Stainless Steel 2 1/2" - 5" Aluminum Bronze 6"-24" Ductile Iron	2"-12" Monel 2 1/2"-12" 316 Stainless Steel 6"-24" Aluminum Bronze
6	Thrust Washer (Qty. 4)	PTFE	No option available
7	Spring (Qty. 2)	Nitronic 50 (2"-6") 316 Stainless Steel (8"-24")	No option available No option available
8	Alignment Body	Cast Iron	No option available
9	Set Screw	Carbon Steel	No option available
10	Plate Travel Stop	316 Stainless Steel (14"-24")	No option available

\* Items 1 and 2 must be ordered together.

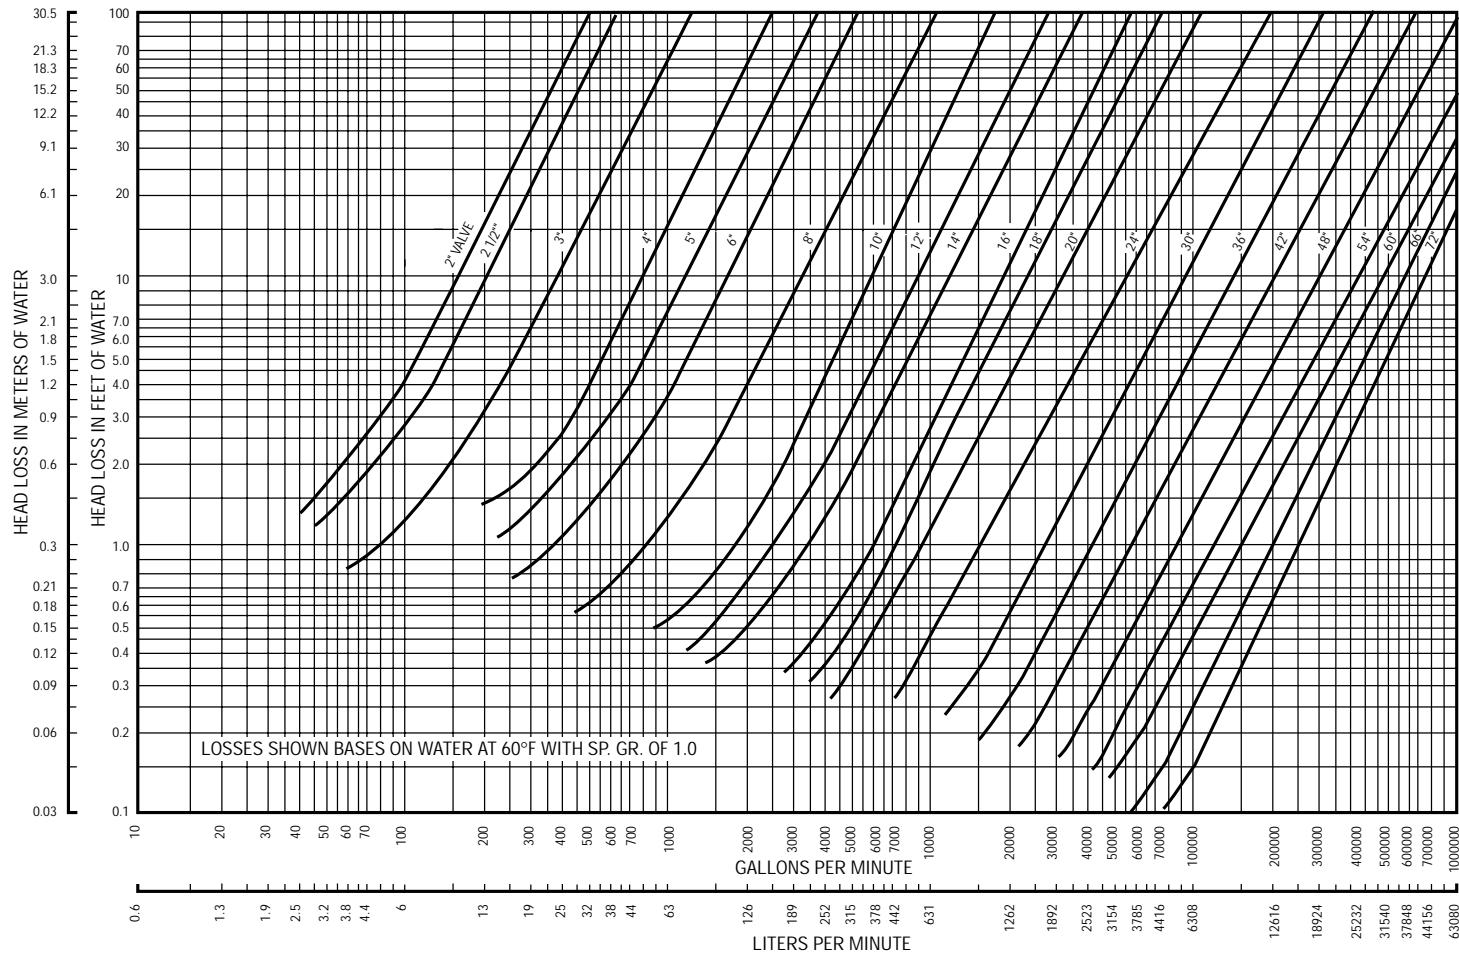

Materials subject to change without notice.

## Technical Data

### Pressure Loss Information

- The curves show pressure drops available with standard torque springs and the Duo-Chek II in horizontal flow.
- Duo-Chek II valves should be installed in horizontal flow with pins vertical for best performance. For other installations, contact the factory.
- We can evaluate Duo-Chek II valves relative to your system behavior.

- Systems with drastic flow decelerations may require higher torque springs for faster valve response and to reduce water hammer. Please consult the factory.
- Each piping system has a unique geometry which should be evaluated whenever the liquid media velocity exceeds 8 feet/second (2.4m/sec) through a swage or expansion (15° or greater included angle) directly upstream of the valve. Where practicable, a minimum of five (5) pipe diameters distance should be maintained between the valve and the pump discharge and pipe fittings (swages or expansion) for maximum service life.

- Spring cracking pressure is the pressure required to lift the plates off the seat.
- Other springs available, consult factory.
- Valves 6" and larger have independent springs.

### Spring & Drain Size Information

#### Spring Selection Guide

Spring Material	Operating Temperature Range	
	°C	°F
Inconel 600	-250 to 315	-420 to 600
Type 316 S.S.	-129 to 120	-200 to 250
Inconel X-750	-250 to 537	-420 to 1000
Monel 400	-250 to 205	-420 to 400

- Spring materials are included in trim materials as an important part of materials selection. The most common standard trim materials are shown under Ordering Information.
- For unique service conditions, different torque springs as well as other spring materials are available.

#### Drain Sizes (Available when specified)

ASME Class 125 (Cast Iron) Schedule A	
2" – 8"	1/8"
(50mm – 200mm)	(3.18mm)
10" – 12"	3/8"
(250mm – 300mm)	(9.52mm)
14" & up	3/4"
(350mm & up)	(19.1mm)
ASME Class 150-2500 Schedule B	
2" - 2 1/2"	1/4"
(50mm – 65mm)	(6.35mm)
3" - 4"	3/8"
(75mm – 100mm)	(9.52mm)
5"	1/2"
(125mm)	(12.7mm)
6" & up	3/4"
(150 mm)	(19.1mm)

- All drain holes are located in the plane of the seal and 180° from the lift hole.

(1) Permissible, but not recommended for prolonged use above 800°F (427°C)

## Ordering Information

### Figure Number System

Size	Style	Pressure Class	Body & Plate	Seal	End Connection	Body Configuration	Modification Number
24"	H	15	S	M	F	3	— 9

**DESCRIPTION:** 24" Style H, ASME Class 150, Carbon Steel Body and Plates, Buna-N Seal, raised face flanges, with double flange body, (modification number indicates Inconel X spring)

Valve Size
Nominal valve sizes are expressed in inches or millimeters.
<b>In Inches:</b> For use with ASME, API and BS Flange Standards.
<b>In Millimeters:</b> For use with DIN, AS or JIS rated valves (size preceded by "M" for DIN, "A" for AS or "J" for JIS).

Style		
Ordering Letter	Body Type	Size Range
G	Standard Design, Wafer	2" through 88" (50mm through 2200mm)
H	Retainerless Duo-Chek Design Wafer, Lug or Double Flange	2" through 88" (50mm through 2200mm)
X	Extended Body Design	2" through 72" (50mm through 1800mm)
U	Underwriters' Laboratories Listed Valves for Fire Protection Service	4" through 12" (except 5") (U12 HMP Valves Only)
W*	Bodies with Integral Weld-Ends	2" through 72" (50mm through 1800mm)

\*Weld-end valves also require the additional designation of the pipe schedule they are designed to fit.

Pressure Classes							
ASME		API <sup>A</sup>		DIN / JIS <sup>1</sup>		BS / AS <sup>2</sup>	
Ordering No.	Class	Ordering No.	Class	Ordering No.	PN Rating	Ordering No.	Table
12	125	21	2000	Flange Standard:	6		
15	150	31	3000	M - DIN	10	B - BS	A thru T
30	300				16		
40	400	51	5000	J - JIS	25		
60	600				40		
90	900	101	10000		64		
150	1500				100		
250	2500	151	15000		160		
450	4500				250		
					320		

△ API Class is shown in psig, cold working pressure.

1 Metric valves with DIN or JIS standard flanges are designated by having the nominal size expressed in millimeters, preceded by "M" or "J". Flange ratings in PN numbers are then listed after the valve style, as in ANSI or API Valves.

**Example:** M 100 (4" ) G16 SPF

Flange Standard  
(M - DIN)  
100mm Size

Pressure Rating, PN  
for DIN or JIS  
(in bars)

This specifies a metric valve, designed to fit between DIN flanges. Nominal size is 100 millimeters (corresponding to 4"), Style G Duo-Chek II with a pressure rating of 16 bars, carbon steel body and plate, metal seat, and raised face end connections.

2 Valves designed for use with British Standard 10 or Australian Standard 2129 are defined by adding two letters between the style of construction and pressure rating. First letter designates the standard, and the second letter denotes the table in that standard.

**Example:** 6" G B E 15 BNF

Flange Standard  
B - British Std. 10

ANSI Class  
is made from

Table in corresponding  
Standard

Figure number lists a 6" Style G Duo-Chek II, designed to fit between British Standard 10, Table E Flanges, using a Class 150 Valve, having an aluminum bronze body and plates, Neoprene seal and raised face end connections.

# Duo-Chek® II Valves

## Duo-Chek II Specials

**Grayloc® Hub End Valves**

Valves with Grayloc ends may be furnished for use with hub end, clamp-style connections. These end connections simplify installation procedures in systems that utilize them. Please contact your sales office for information regarding sizes and pressure ratings available, and other hub end connections such as Spolock, Seaboard Lloyd, etc.

**Butt Weld Valves**

Valves with butt weld ends may be furnished for piping systems designed for welded system components to eliminate potential joint leak paths. See Ordering Information for proper figure number designation, so that weld-end preparations match the mating pipe schedules.

**UL/FM Valves**

Underwriters Laboratories, Inc. approve and list the 4", 6", 8", 10" and 12" Figure U12 HMP Duo-Chek II Valves for 250 psi service in fire protection systems.

Valves are Factory Mutual Research Corporation approved.

**Lined Valves**

Duo-Chek II valves may be furnished with linings, when specified, for abrasion or corrosion resistance. Linings include Natural Rubber, Neoprene, Polyurethane, Armorite, Chlorobutyl and Ebonite. All body surfaces of lined valves are covered with the specified material, eliminating the need for gaskets. Hinge and stop pin holes are encapsulated to seal them against line fluids. Solid alloy valves are recommended for extremely corrosive applications.

**Cryogenic Valves**

Duo-Chek II valves may be furnished for subatmospheric to cryogenic temperatures (-50°F through -450°F). Special materials of construction such as low temperature alloy steels, austenitic stainless steel, aluminum bronze or monel are generally required.

### Coated Valves

A variety of coatings may be provided on request to resist corrosion or abrasion. Some of the commonly specified coatings include epoxies, coal tar derivatives and sacrificial zinc primers. Please discuss your requirements with your sales office.

### Other Specials

Other Duo-Chek II specials furnished include:

- Valves to comply with NACE MR-01-75
- Valves cleaned for liquid oxygen (LOX) service
- Valves prepared for Food Service (austenitic stainless steel)
- Special testing for valves, including radiography, magnetic particle, dye penetrant, ultrasonic, helium leak, etc.

## Additional Products

### Uni-Chek<sup>®</sup>

#### Single-Disc Check Valves

- Sizes 2" – 36"
- ASME Classes 125–300
- Flanged, Plain, or Serrated Ends
- Cast Iron, Carbon Steel, and Stainless Steel
- Variety of external shaft options available

### Noz-Chek<sup>®</sup>

#### Nozzle Type Check Valves

- Sizes 2" – 60"
- ANSI Class 150 – 4500
- API 2000 – 15000
- Flanged, Butt Weld, Clamp Hub Ends
- Ductile Iron, Carbon Steel, Alloy Steel, and Duplex Steels
- Metal to Metal or Bubble Tight Resilient Seats

Contact the Belfast, Northern Ireland Office  
for Sales and Product Information.

### Compac-Noz<sup>®</sup>

#### Nozzle Type Check Valves

- Sizes 12" – 60"
- ASME Classes 150 – 4500
- API 2000 – 15000
- Flanged, Butt Weld, Clamp Hub Ends
- Ductile Iron, Carbon Steel, Alloy Steel, and Duplex Steels
- Metal to Metal or Bubble Tight Resilient Seats

Contact the Belfast, Northern Ireland Office  
for Sales and Product Information.
